

LiquidAI: 10-Slide Pitch Deck Content

Note: Each slide is strictly crafted to be under 600 characters for maximum punchiness and readability during a live pitch or rapid VC scanning.

SLIDE 1: TITLE & HOOK

Title: LiquidAI: Agentic Treasury OS **Subtitle:** Yield-Backed Banking meets ZK-Privacy on Celo. **Body:** We transform idle stablecoins into an autonomous, yield-generating "Digital Offshore" for the Opera MiniPay ecosystem. LiquidAI abstracts gas, routes capital via Agent-to-Agent Dark Pools, and protects user privacy using zero-knowledge UTXO notes. The ultimate financial autopilot.

SLIDE 2: THE PROBLEM

Title: The Idle Capital Trap & Public Exposure **Body:**

1. ⚡ **Inflation & Idle Cash:** Emerging markets use stablecoins to escape inflation, but capital sits idle earning 0%.
 2. ⚡ **DeFi Friction:** Gas fees and complex UX block retail adoption.
 3. ⚡ **The Privacy Flaw:** Public EVM chains expose user balances and transfers to MEV bots and local surveillance, preventing true institutional and retail sovereignty.
-

SLIDE 3: MARKET VISION

Title: A Perfect Storm: Celo + Opera MiniPay **Body:** Opera just proposed acquiring 27% of the CELO supply (160M tokens). Opera *is* Celo now. By building natively for MiniPay, we are building for the largest institutional stakeholder. The market is ready for a "Set-and-Forget" financial autopilot bridging high-yield DeFi and instant local payments (PIX) for 14M+ captive users in LATAM and Africa.

SLIDE 4: THE SOLUTION

Title: LiquidAI Agentic OS **Body:** An autonomous AI Agent that manages your stablecoins via natural language. You deposit cUSD. The Agent routes it to the safest yield (Mento/Aave), abstracts all gas fees, and keeps a liquid buffer ready for instant real-world spending (PIX/Fiat). No DeFi jargon. No seed phrases. Just yield, liquidity, and simplicity.

SLIDE 5: THE UNFAIR ADVANTAGE

Title: ZK-Shielded "Digital Offshore" **Body:** We abstract visibility, not just UX. LiquidAI migrates public balances to encrypted UTXO notes inside the Celo EVM. We operate a Private Computer. Swaps happen in A2A (Agent-to-Agent) Dark Pools with zero slippage and MEV protection. Crucially, it includes Proof of Innocence (PoI) for strict regulatory compliance with Fiat On/Off-ramps.

SLIDE 6: PRODUCT & UX

Title: Just-In-Time (JIT) Funding **Body:** The Agentic Engine listens to your intent. Need to send a PIX? The Agent automatically unrolls yield from Aave, swaps cUSD to BRLm via Mento V3 (or our internal Dark Pool), and unshields it directly to the Off-Ramp API. End-to-end execution in < 5 seconds. The user only sees a simple chat interface. The complexity is entirely hidden.

SLIDE 7: GO-TO-MARKET (GTM)

Title: Retail Validation to Institutional Scale **Body:** **Phase 1: Trojan Horse.** Launch on MiniPay offering 5-8% APY to protect retail from inflation. **Phase 2: A2A Remittances.** Internal dark pool matching for zero-slippage cross-border swaps. **Phase 3: The B2B API.** Open the ZK-Shielded Treasury to Family Offices and Corporate Wallets demanding on-chain privacy without sacrificing yield.

SLIDE 8: REVENUE MODEL

Title: The Zero-Friction Multiplier **Body:** 100% on-chain, 99% margin.

1. ⚡ **Yield Spread:** 1.5% APY on managed TVL.
 2. ⚡ **Match Fee:** 0.15% flat per Dark Pool swap.
 3. ⚡ **Relayer Premium:** Gas abstraction arbitrage. By replacing human bloat with an Autonomous Agentic Workforce (AI QA, Relayers), our OpEx stays at \$65k/yr. As TVL scales infinitely, profit margins hit 99%.
-

SLIDE 9: ROADMAP

Title: From MVP to Global Scale **Body:** **Q1:** MiniPay Agent, Stablecoin Abstraction, Self Protocol Identity. **Q2:** Deep Mento V3 Routing, Route Scoring, FPMM Spreads. **Q3:** Yield Batching, Merkl Rewards, Collateralized Micro-Credit. **Q4:** ZK-Shielded UTXO deployment, Proof of Innocence API, Pismo (Visa) Integration for global physical card spending.

SLIDE 10: TEAM & ASK

Title: The Autonomous Swarm **Body:** Built by Double Green (Architect) and a swarm of specialized AI Agents. We apply Agent-to-Agent (A2A) logic not just to our Dark Pools, but to our codebase and QA operations. **The Ask:** We built the MVP. We proved the Agentic routing. Join us to build the definitive Digital Offshore for the next billion Celo users.
