

# LiquidAI: The Agentic Treasury OS

Transforming idle stablecoins into a ZK-shielded, yield-generating 'Digital Offshore' on Celo.

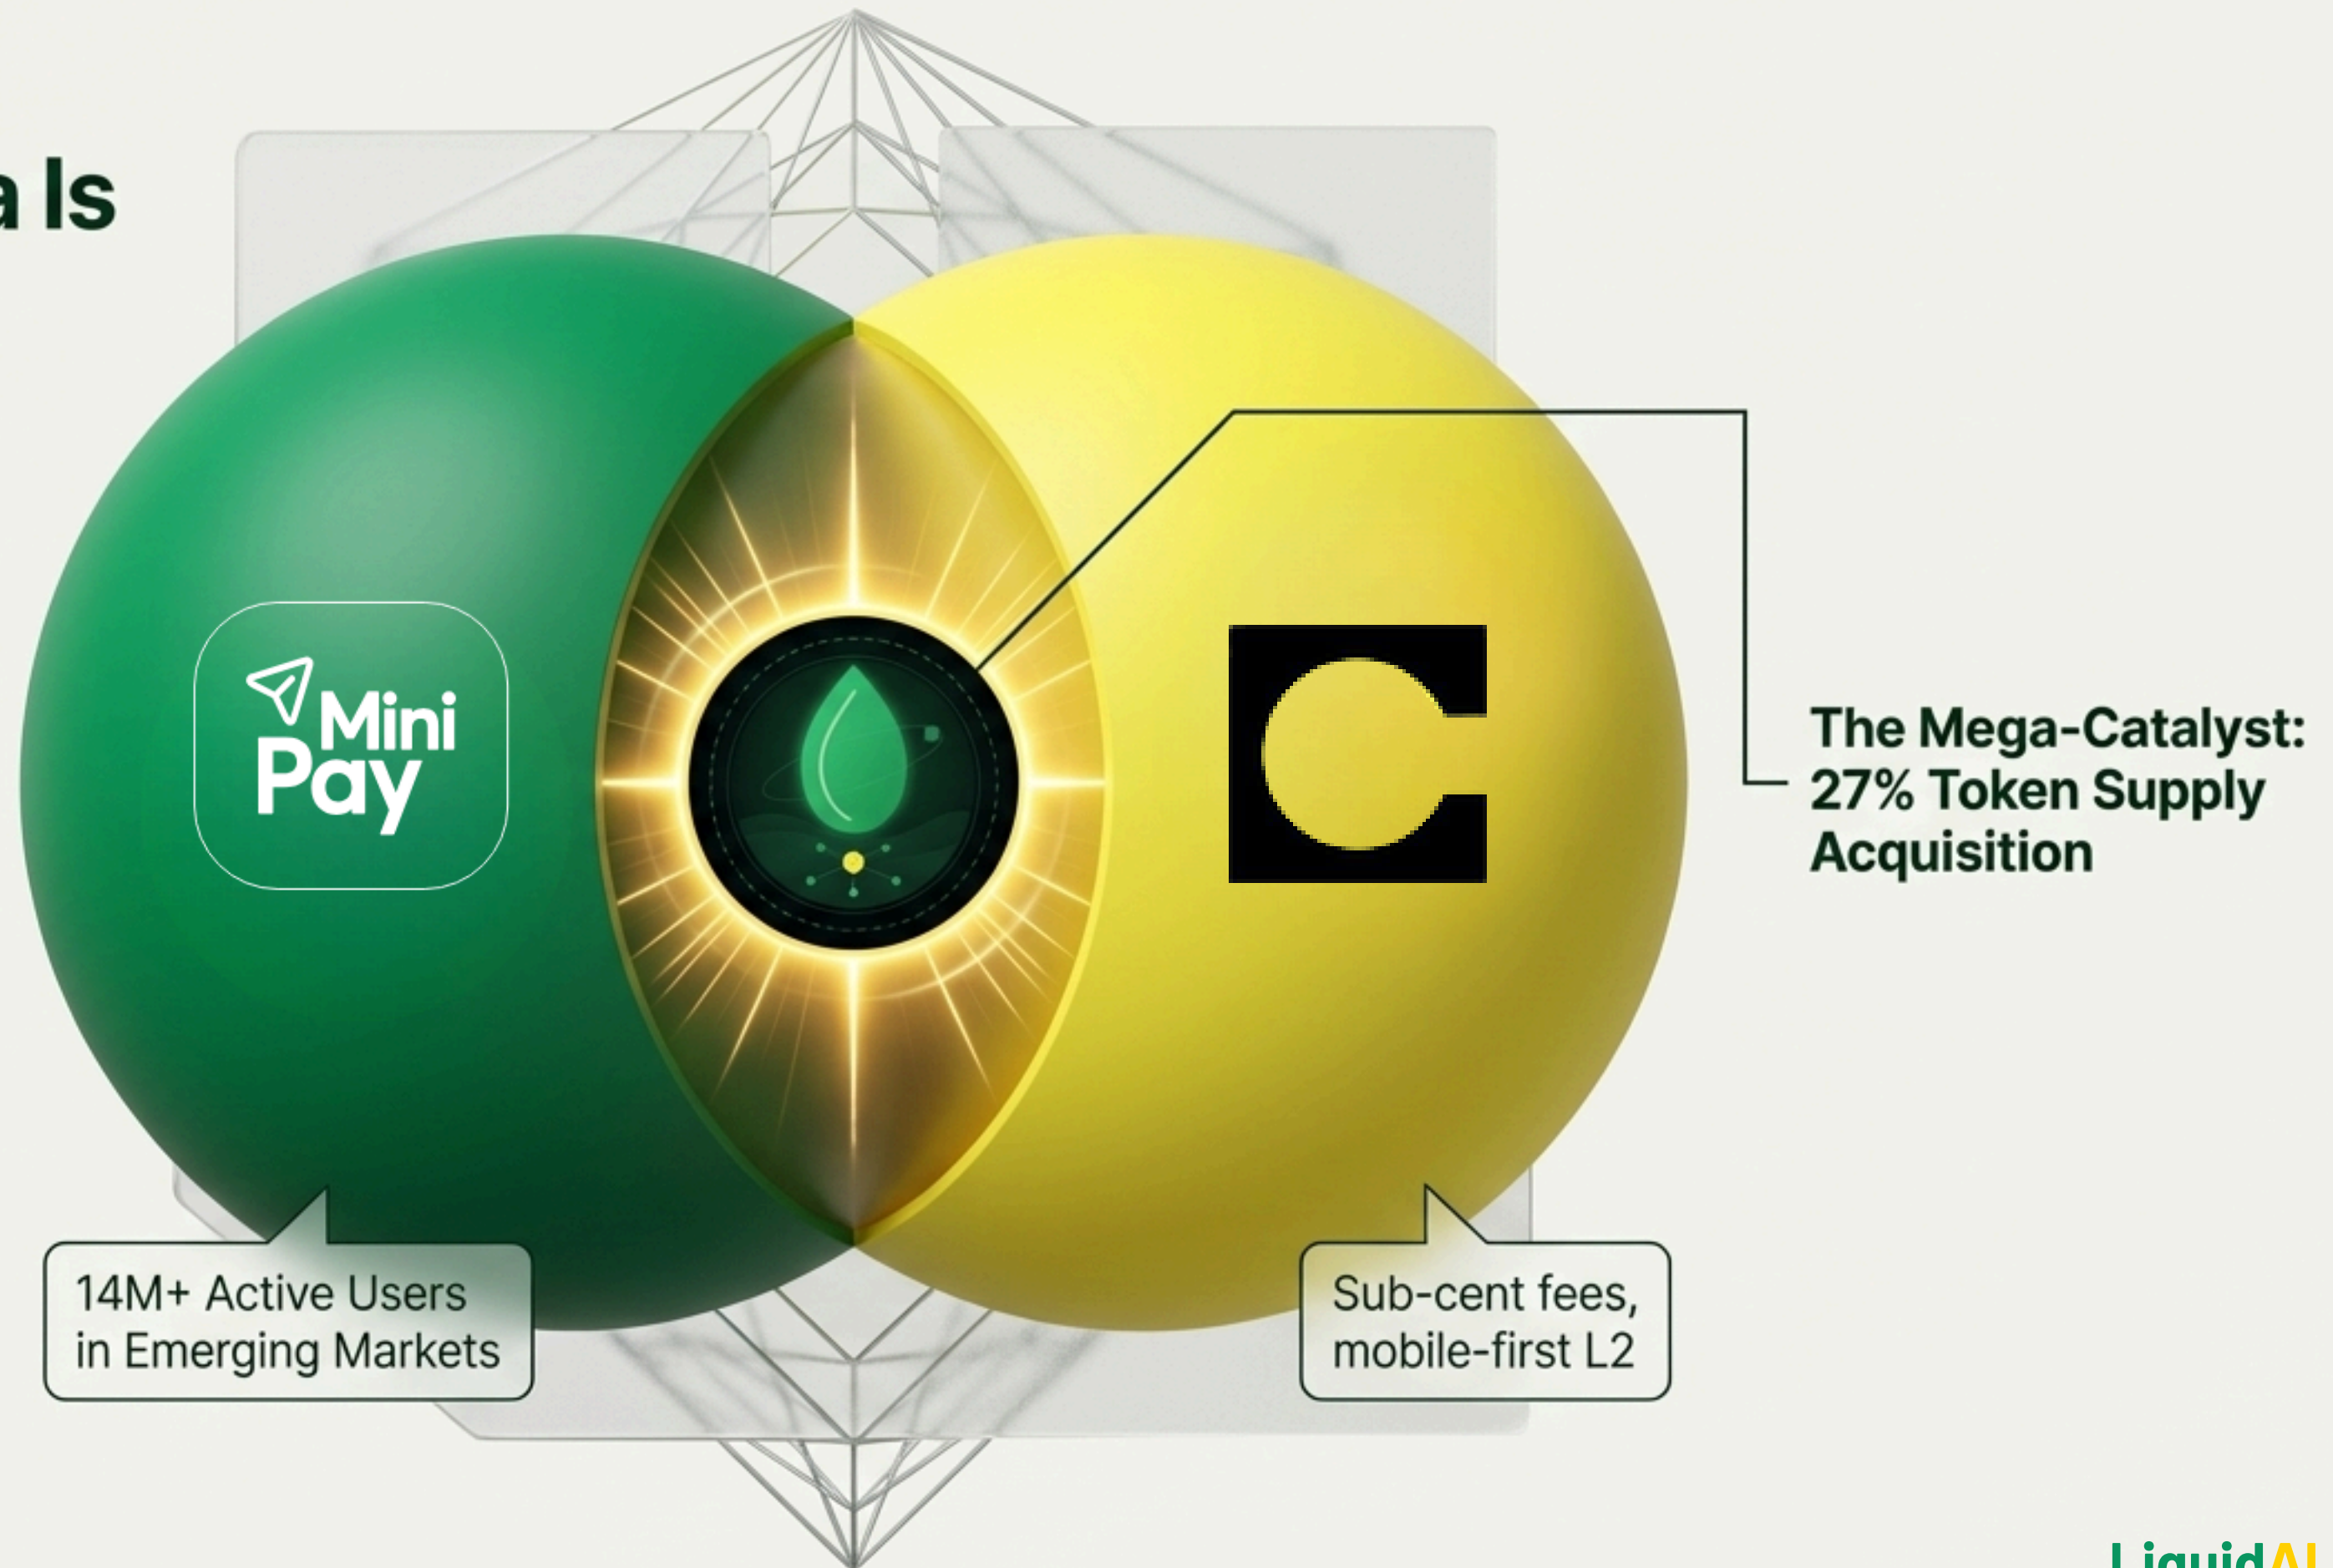

**Key Takeaway: High yield meets absolute privacy.  
Gasless, invisible, and autonomous.**

# A Perfect Storm: Opera Is Celo Now

Opera recently proposed acquiring 160M CELO tokens—27% of the entire circulating supply. This fundamentally alters the ecosystem, making MiniPay the undisputed financial hub of the network.

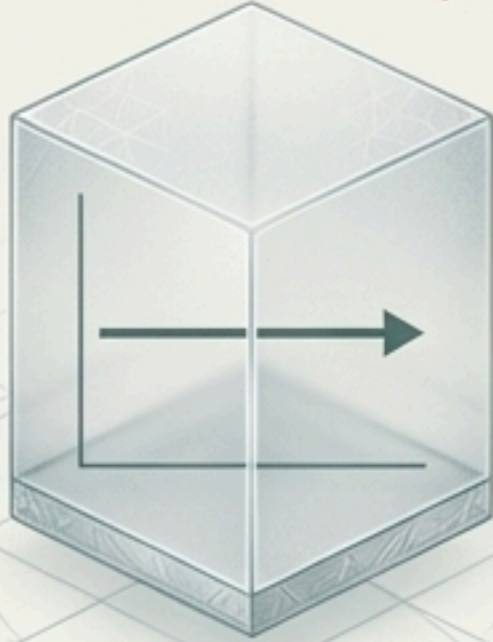

**By building natively for MiniPay, LiquidAI aligns flawlessly with the network's largest institutional stakeholder.**

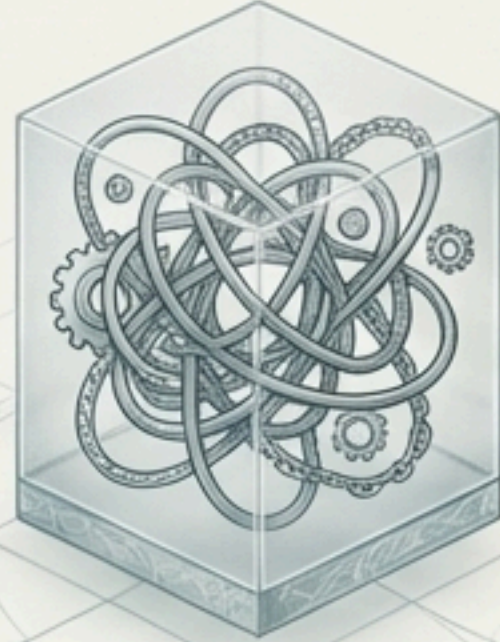

# The Autopilot: Abstracting DeFi for the Next Billion

## Before: The Idle Capital Trap

0% APY  
(Inflation  
Loss)

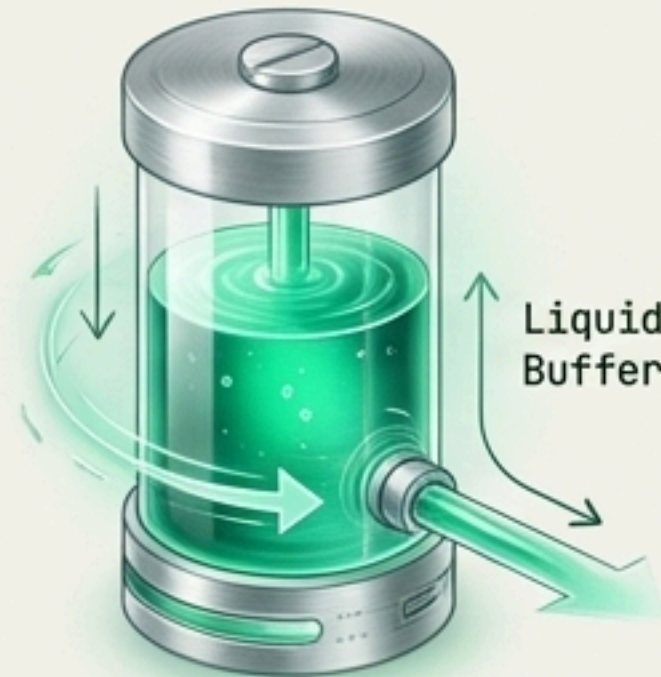

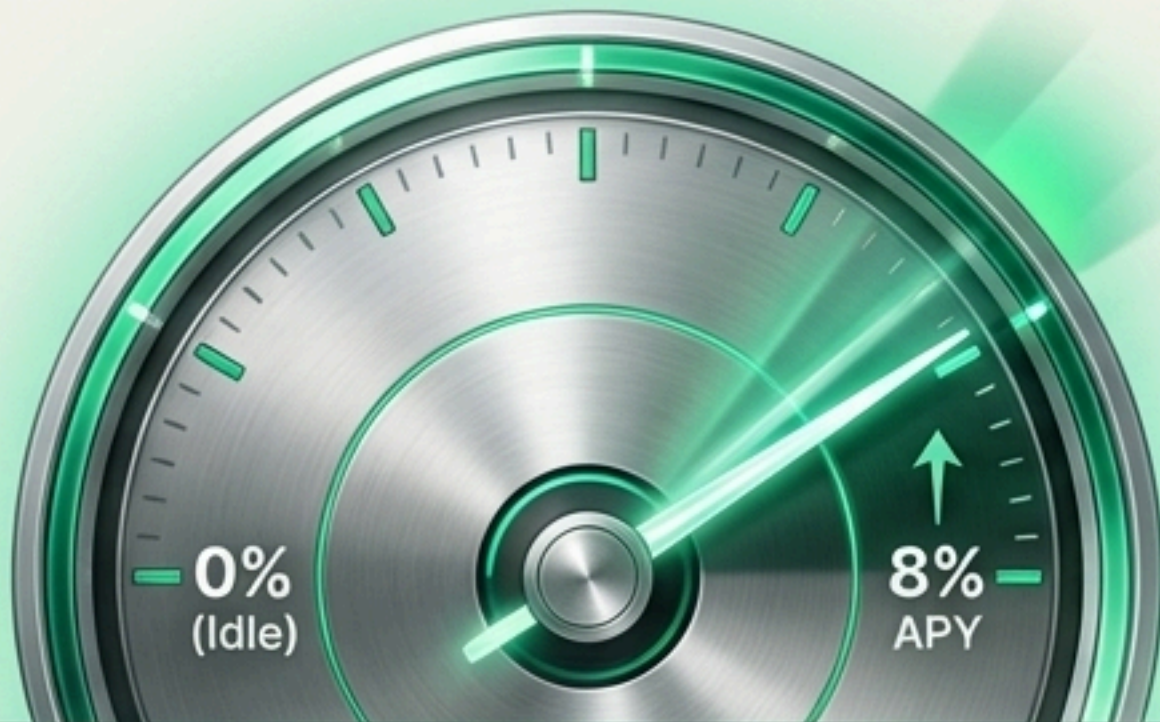

Gas Fees  
& DeFi  
Jargon

Public  
MEV  
Exposure

Users hold stablecoins to escape local inflation, but capital sits idle at 0% because DeFi is too complex, gas is expensive, and public chains expose balances.

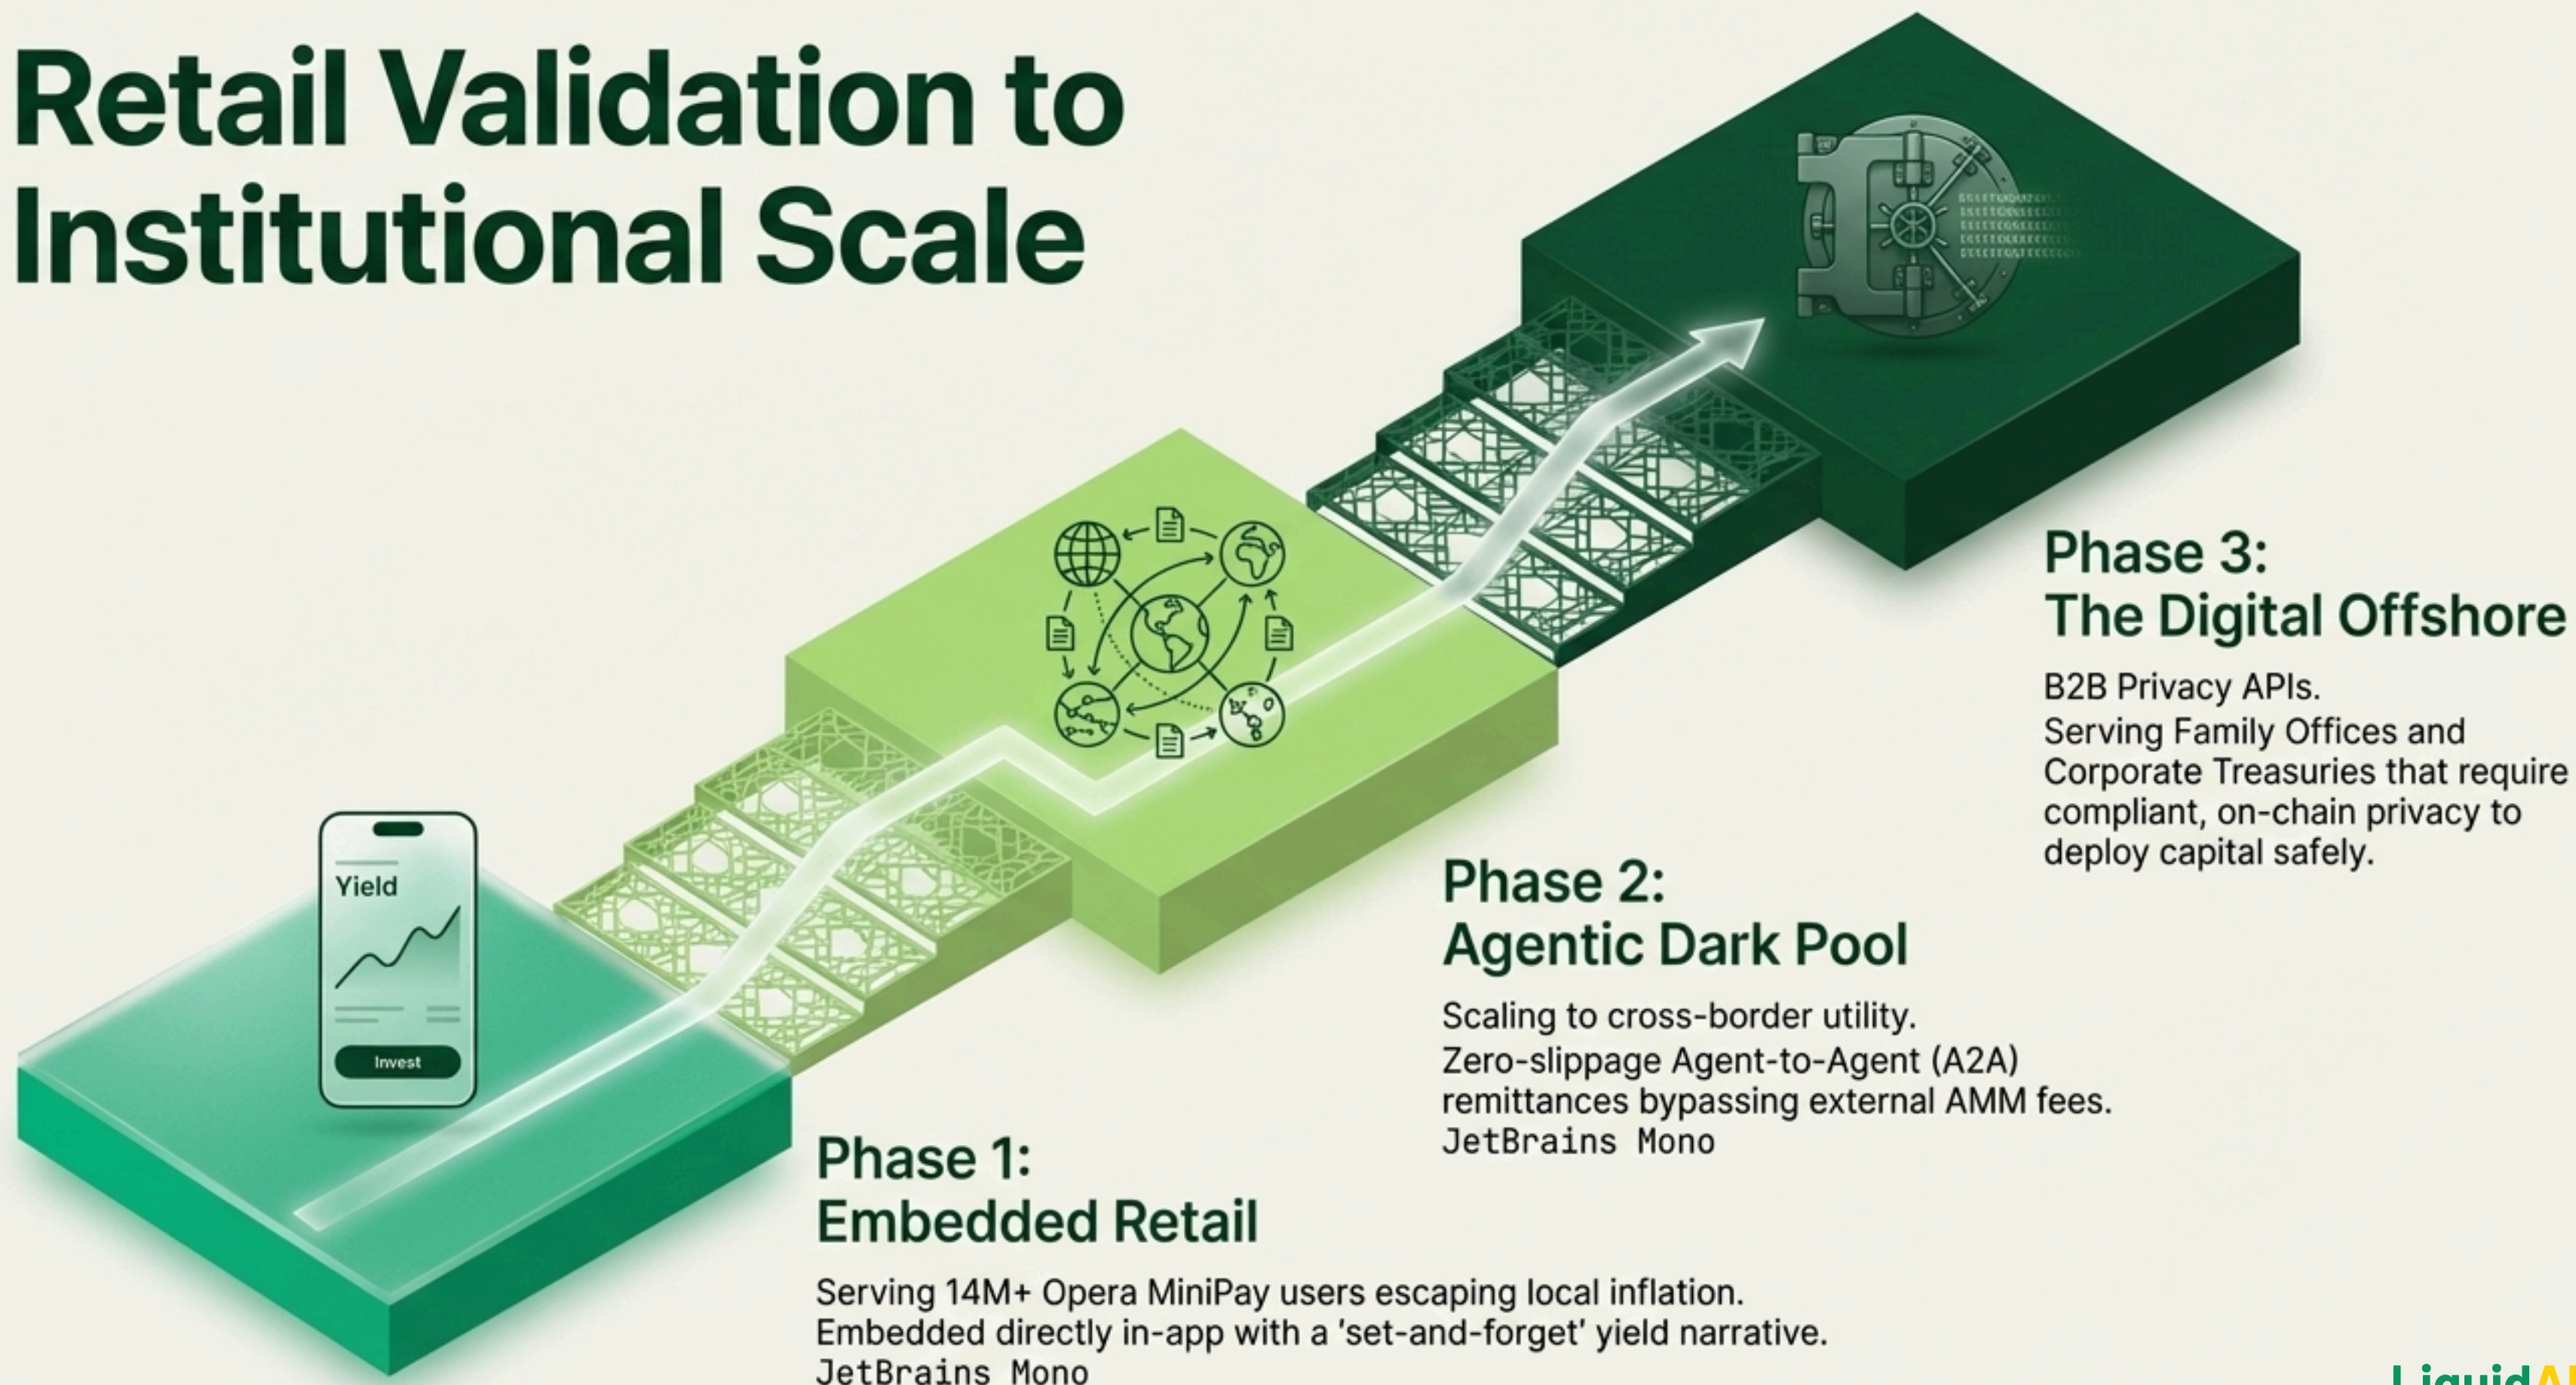

## After: The LiquidAI Solution

You deposit cUSD. The Agent autonomously routes it to the safest yield (Aave/Mento), abstracts all gas fees, and maintains Just-In-Time (JIT) liquidity for instant PIX withdrawals in under 5 seconds.

# Retail Validation to Institutional Scale

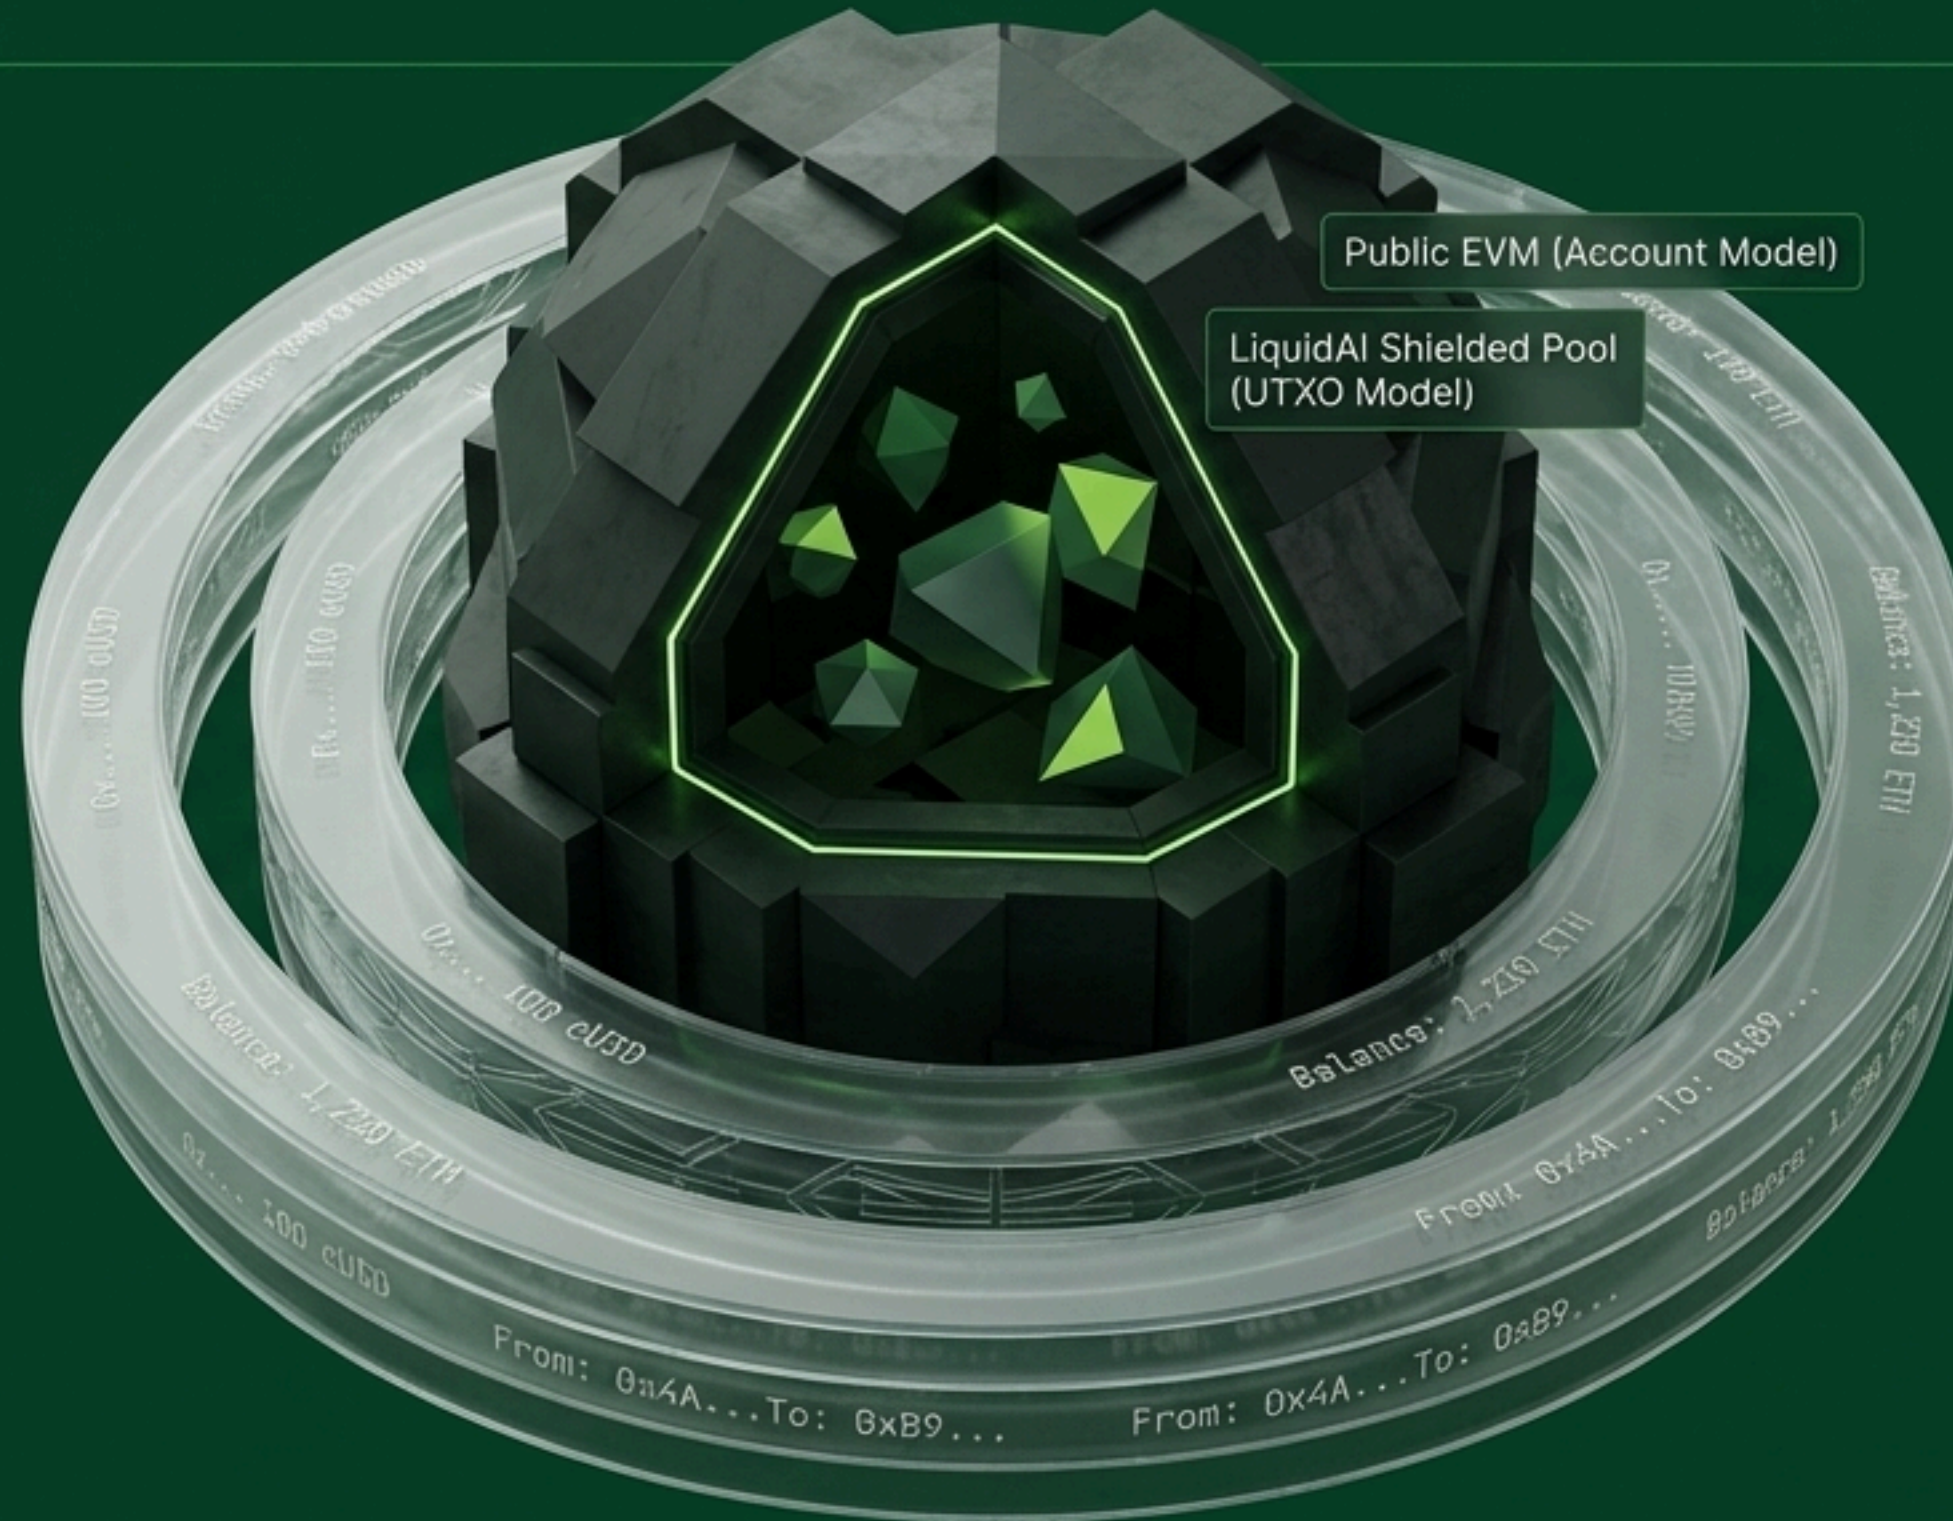

# Operating a Private Computer on the EVM

## The Moat

We migrate public account balances into ZK-encrypted UTXO (Unspent Transaction Output) notes.

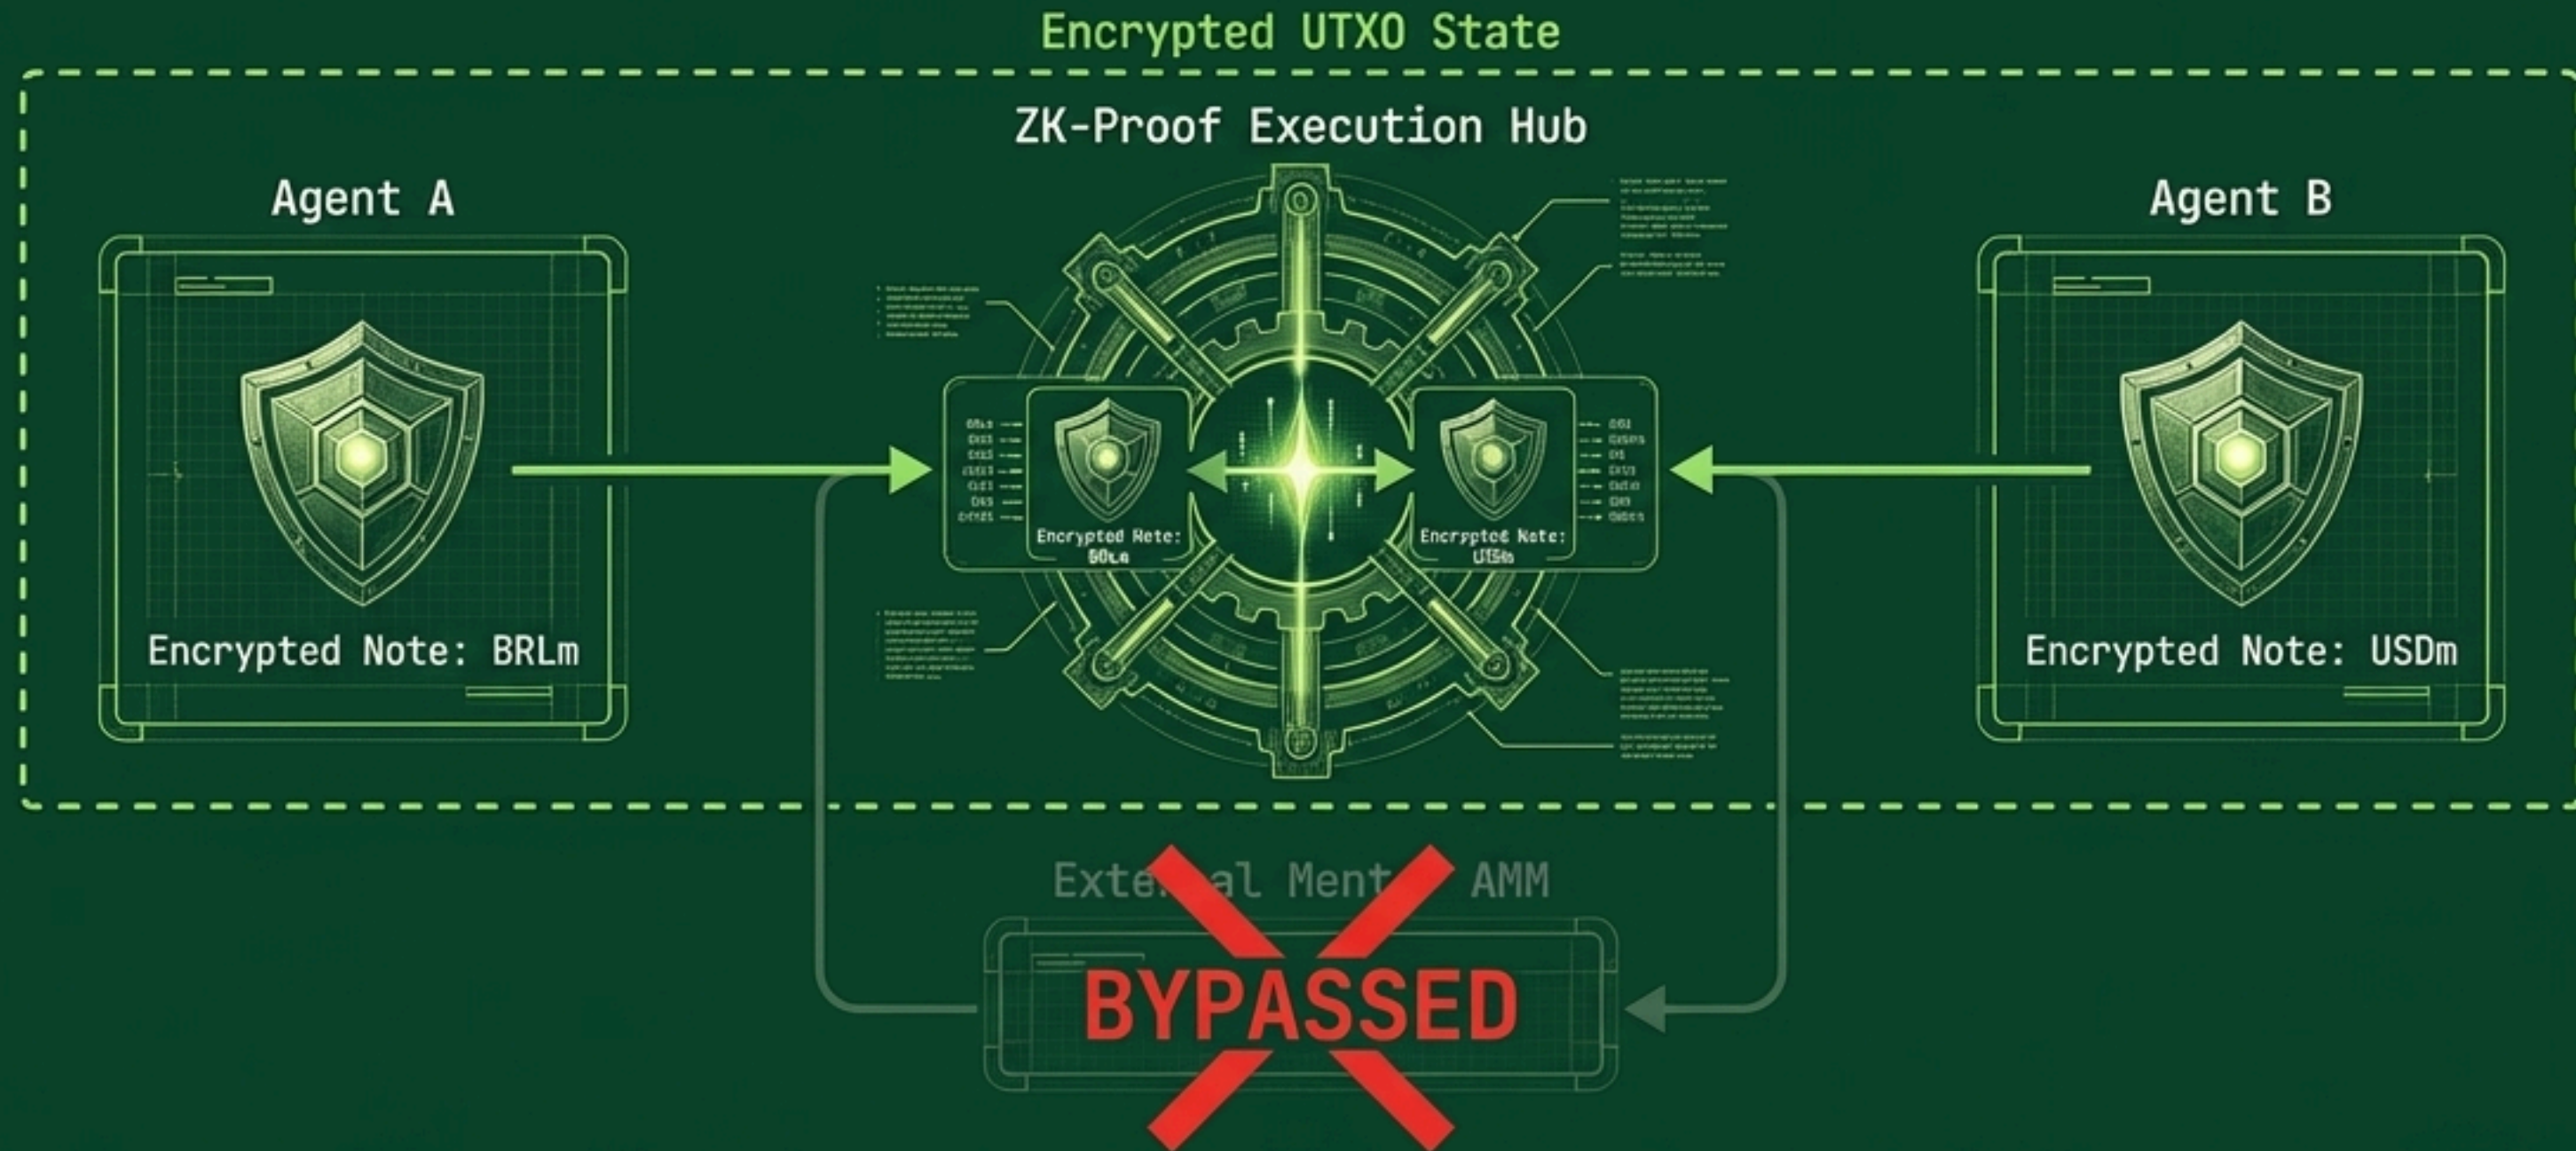

## The Result

The EVM only sees cryptographic commitments and nullifiers.

We completely shield user capital from public surveillance and MEV bots, creating a true "Digital Offshore" while maintaining Proof of Innocence (PoI) compliance.

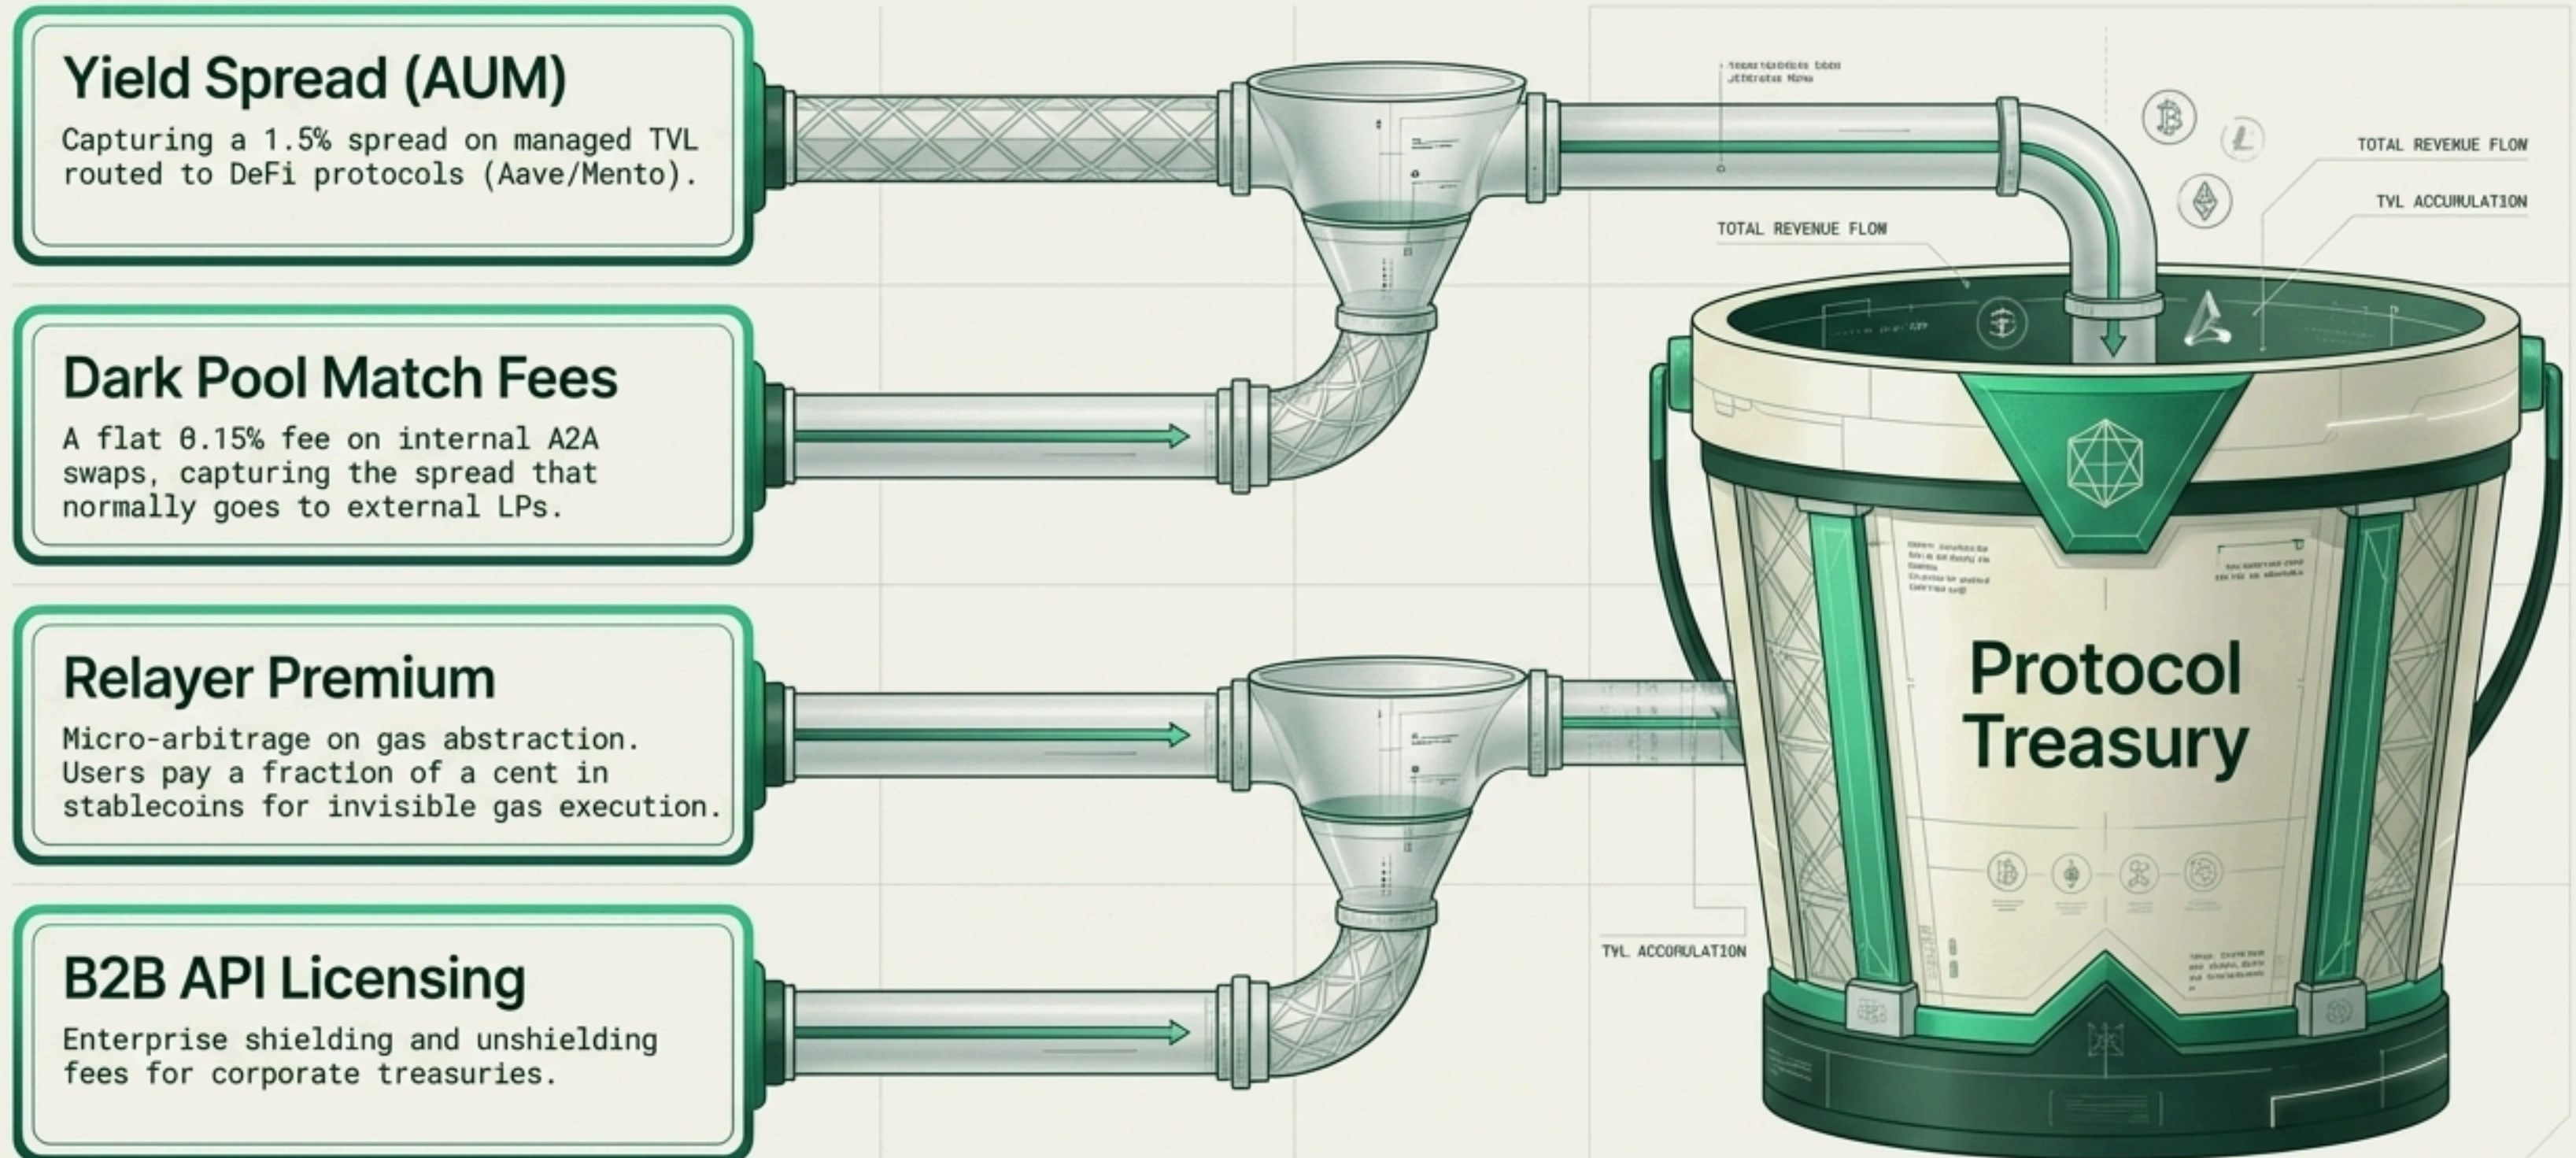

# ZK-UTXO Meets the Agent-to-Agent (A2A) Dark Pool

| Mechanism                                                                                                                 | The Magic                                 | Outcome                                                                                             |
|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Agent A and Agent B operate exclusively inside the encrypted UTXO state. They swap encrypted notes locally via ZK-proofs. | The swap bypasses external AMMs entirely. | Zero slippage, zero MEV front-running, and completely invisible execution at the true oracle price. |

# Monetizing Efficiency at Massive Scale

The protocol makes money without charging the user direct friction fees.

# The Ultra-Lean Autonomous Swarm

**\$1.5M/yr OpEx**

 **Legacy Web2 Cost Structure:** Human developers, expensive legacy auditors, AWS server bloat, and manual compliance teams.

**Total: ~\$1.5M/year.**

**\$65k/yr OpEx**

 **LiquidAI Web3 Cost Structure:** We replace operational bloat with autonomous code. Double Green (Architect) orchestrates an AI Swarm for QA/Dev, utilizes Decentralized RPCs (\$0 infrastructure cost), and relies on mathematical ZK Proof of Innocence.

**Total: ~\$65k/year.**

**The Multiplier:** At scale, the autonomous protocol achieves theoretical maximum profit margins of 99%.

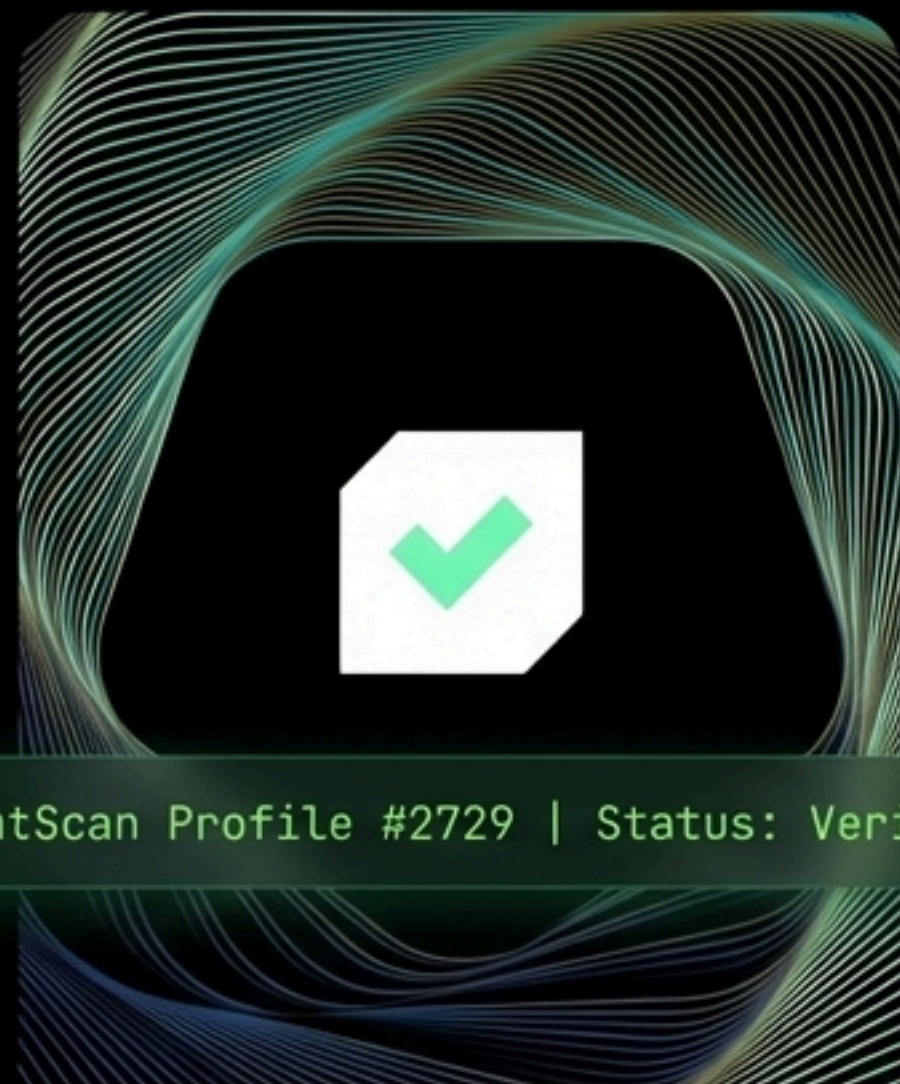

# The LiquidAI Business Flywheel

The Loop: Zero-friction retail onboarding inside MiniPay bootstraps deep **Dark Pool** liquidity. This deep liquidity makes the platform irresistible to **highly lucrative B2B enterprise** clients. The resulting **API revenue** funds the **AI Swarm**, which continuously improves the **retail yield**.

AgentScan Profile #2729 | Status: Verified

## Proof Verified

You've successfully proved your identity to  
Self Agent ID

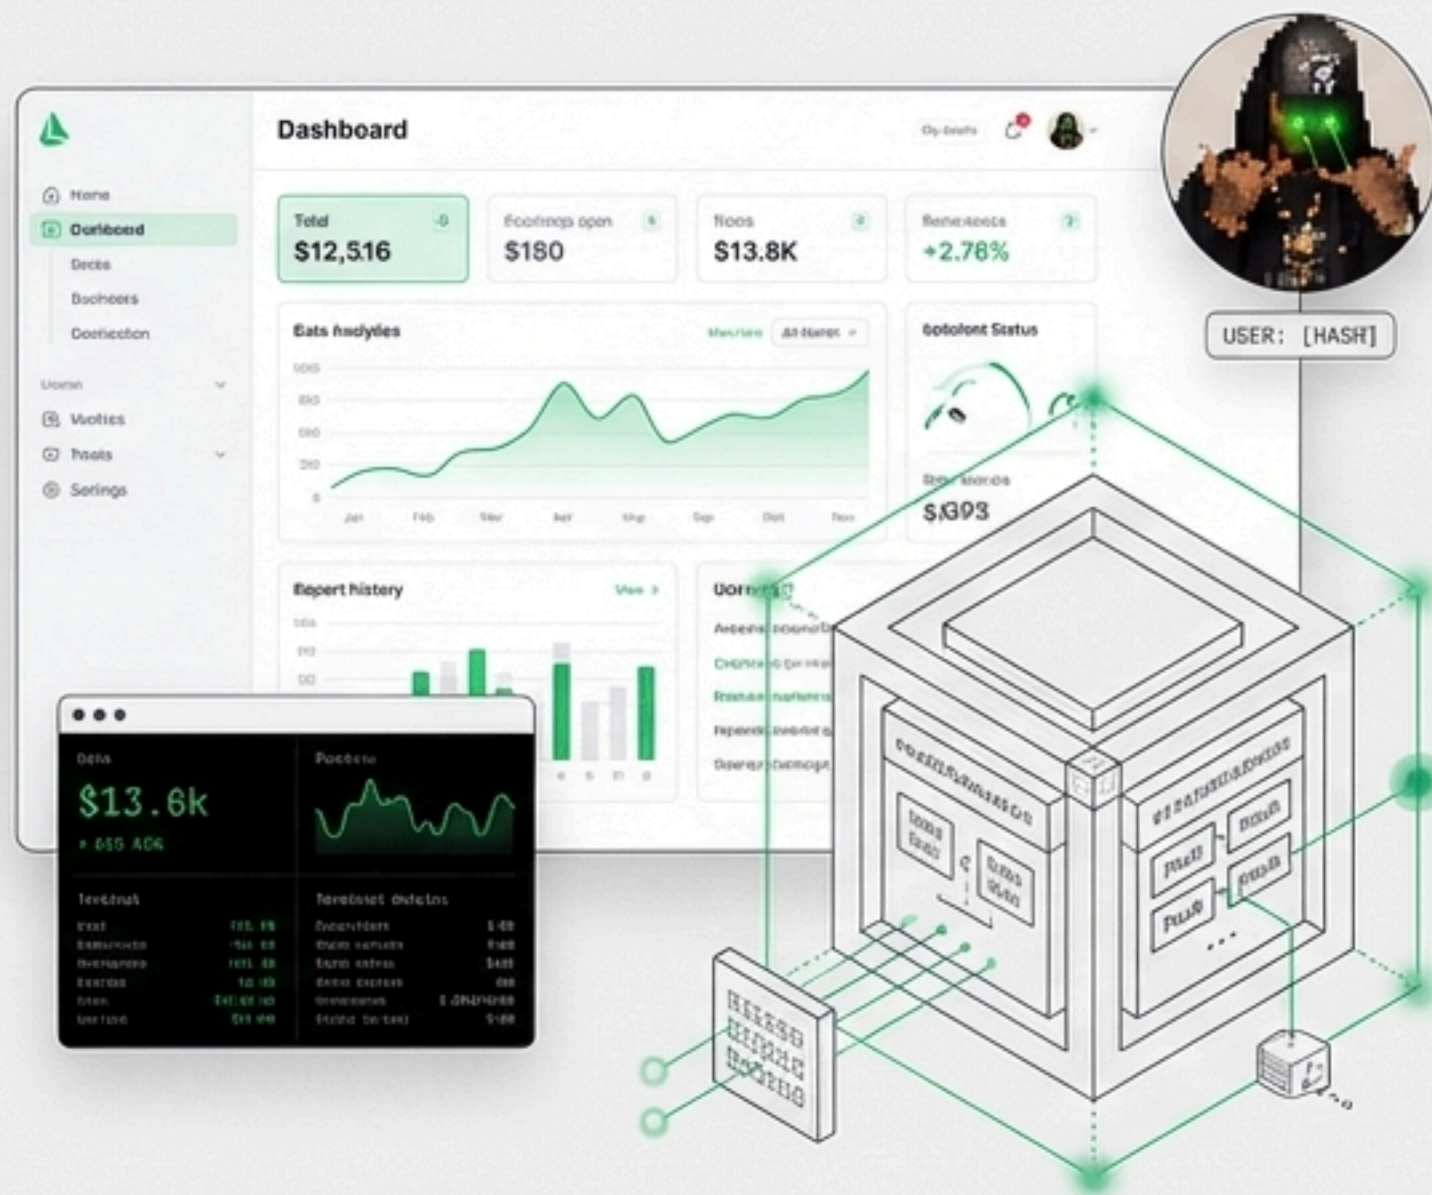

OK

# The Future is Already Built

The MVP is live. We have successfully proven the Agentic routing, integrated the stablecoin fee abstraction, and verified the ZK Proof of Humanity on-chain via Self Protocol.

**We have the catalyst, the architecture, and the agentic swarm.** Join us to scale the definitive Digital Offshore for the next billion Celo and Opera MiniPay users. Let's make finance invisible.

- MVP Built.
- On-Chain Verified (Alfajores/Celo Mainnet).
- Agentic Routing Proven.

# The Definitive Digital Offshore.

We have built the **intelligence** layer for the Celo ecosystem. Join us to scale **LiquidAI** to the next billion users.

LiquidAI

O LiquidAI foi desenvolvido para competir simultaneamente nestas duas competições: o hackathon Build Agents for the Real World V2 e o hackathon The Synthesis.
